

ACCUBIN™

INVENTORY MANAGEMENT

PROACTIVELY MANAGE INVENTORY

AccuBin™ Inventory Management gives you real time inventory information. Analyzing inventory history, AccuBin™ accurately predicts when vessels are going to be empty. Proactively track your inventory to prevent cut costs such as off-hour and weekend deliveries, haul-backs, outages, daily physical inventory, etc.

ACCOUNT FOR MATERIAL LOSS

Inventory reconciliation is made easy through AccuBin™ user-specific notifications. Inventory levels at your fingertips allow you to reconcile inventory quickly and efficiently to keep your facility on the right track. With AccuBin™, you can address material loss concerns daily, rather than monthly.

STREAMLINE DELIVERIES

Analyzing inventory history and using a patented software algorithm, AccuBin™ accurately predicts when vessels are going to be empty. Similar to traffic lights, color-coded indicators are clearly defined for normal, warning and critical levels. This allows you to optimize deliveries and avoid costly expedites. Receive real-time confirmation when and where deliveries take place at your site. These features allow you to streamline your delivery schedule and meet production needs.

INVENTORY MANAGEMENT FOR PLASTICS

AccuBin™ is a comprehensive, cloud-based, inventory management system that allows you to remotely monitor inventory through a user-friendly dashboard. This software provides a secure platform to view both real-time and historical trends in your inventory data. AccuBin™ is designed to eliminate the stress and guess work out of bulk solid inventory management.
